CURRICULUM VITAE

PUNE, INDIA ↗

Radhika *Daithankar.*

AI engineer.
Founder.
Builder.

I build software and machine learning projects, from training models to developing products people use. My experience spans data analysis, deep learning, web development and school technology.

I founded Evaradh and independently built CIS Compass, its school management app, alongside the Chintamani International School website.

01 Experience

NOV 2025 – PRESENT

CURRENT ROLE

Managing Director

Chintamani International School ↗

Parbhani, India

- Lead organizational and technology initiatives, with a focus on digital transformation and academic and operational workflows.
- Identify problems across the school, develop software solutions and drive their implementation.
- Independently built the school website and CIS Compass under Evaradh, bringing school operations and parent communication into one platform.

MAR 2025 – SEPT 2025

Data Science Intern

The Developers Arena

- Cleaned, transformed and analyzed datasets using Python, NumPy and Pandas, with exploratory analysis and statistical testing.
- Built and evaluated regression, random forest and CNN models, completing a project through model deployment.

APR 2024 – JUN 2025

Data Analyst

JSYSC Holdings Ltd. · YORI

London, UK

- Built a data-analysis project to make my own work at YORI easier, analyzing sales, POS and inventory data using Python, SQL and Excel.
- Applied forecasting to demand and staffing needs, and automated data cleaning and reporting workflows.
- Started at YORI as a waitress, then progressed to team leader and supervisor. The data-analysis project I built for myself there led to my Data Analyst role at JSYSC Holdings.

FEB 2024 – AUG 2024

Data Science Intern

Unified Mentor Pvt. Ltd.

- Prepared real-world datasets, handled missing values and inconsistencies, and tuned machine learning models.
- Created visualizations in Tableau and Matplotlib to communicate findings and support collaboration.

FEB 2021 – FEB 2022

Web Developer

Voran Services Pvt. Ltd.

- Developed responsive websites with Bootstrap and modern front-end technologies.
- Contributed to cross-platform mobile application development using Flutter.

02 Education

SEPT 2022 – SEPT 2023

MSc Artificial Intelligence

Queen Mary University of London

London, UK

Machine learning, computer vision and robotics. Academic research and hands-on work training and evaluating deep learning models.

AUG 2017 – AUG 2021

B.Tech Computer Science

MGM's Jawaharlal Nehru Engineering College

Aurangabad, India

Data structures, software engineering and databases, alongside technical events and collaborative projects.

03 Selected projects

Each project below was independently built by me. Full project stories are in my portfolio.

PRODUCT DEVELOPMENT

CIS Compass & school website ↗

CIS Compass, Evaradh's first product, is in daily use at Chintamani International School by 359 parent accounts and 28 teachers for 290 students (October 2026). Built role-based experiences for teachers, parents and operations staff, covering attendance, fees, records, notices and appointments.

Implemented teacher check-in with QR codes refreshed every 15 seconds and a 100-metre campus restriction, plus attendance-triggered parent notifications.

The integrated AI assistant helps teachers take attendance and post homework, adapts syllabus explanations to the class level, and guides students with hints after they share their own homework attempt.

Built with Flutter for Android and iOS, a TypeScript, Node.js and Express API on PostgreSQL with Prisma, a React admin dashboard, Firebase Cloud Messaging and the Gemini API.

COMPUTER VISION

Image classification with ResNet18 & VGG13 ↗

Implemented and evaluated both architectures on MNIST using PyTorch, comparing their approaches to image recognition.

GENERATIVE MODELS

Generative adversarial networks ↗

Implemented a PyTorch GAN on MNIST with generator and discriminator networks, a custom training loop, sample grids and loss tracking. View the public notebook ↗

ROBOTICS

Panda robot motion planning ↗

Developed a ROS package for Cartesian movement and autonomous geometric drawing with a Panda manipulator.

EMBEDDED SYSTEMS

Gesture-controlled wheelchair ↗

Designed and built an Arduino-based hand-gesture control system, combining machine learning with embedded motor control.

04 Skills & tools

Programming

Python, TypeScript, Dart, SQL, HTML, CSS

AI & machine learning

PyTorch, Scikit-learn, Gemini API, deep learning, computer vision, generative models

Data & analytics

NumPy, Pandas, SciPy, Tableau, Excel, Matplotlib, Seaborn

Application development

Flutter, Node.js, Express, React, PostgreSQL, Prisma, Firebase, Bootstrap, ROS, Arduino

Product & technology

Product development, AI product development, software development, automation

Platforms

Linux, Windows, macOS
